PROFESSIONAL SUMMARY

Frontend developer building production-style React and TypeScript interfaces, with three live deployed projects, a remote web development internship and open-source team contributions with pull requests and peer code review. Focused on reusable component architecture, responsive layouts, REST API integration, SEO metadata and clean Git workflows. Also builds backend APIs with Node.js, Express and MongoDB, with a growing full-stack focus. Mechanical engineering graduate with strong troubleshooting and documentation habits.

TECHNICAL SKILLS

- **Architecture and UI:** Reusable component design, state management with hooks, responsive design, UI implementation, Framer, Open Graph and SEO metadata
- **Frontend:** HTML5, CSS3, JavaScript (ES6+), React.js, Next.js, TypeScript, Tailwind CSS, Vite
- **Backend and data:** Node.js, Express.js, MongoDB Atlas (Mongoose), Supabase, PostgreSQL, REST API integration
- **Deployment:** Vercel, Netlify, Render
- **Tools and workflow:** Git, GitHub (branching, rebasing, pull requests, code review), Postman, ClickUp, Jest/Vitest
- **Testing:** Manual testing, input validation, cross-browser testing

PROJECTS

Modern Store E-Commerce Web App (solo project) | Live | Code

- Designed, built and deployed the full frontend with React, Tailwind CSS and JavaScript ES6+, hosted on Vercel
- Built a product grid with category filtering, real-time search and single-product detail views
- Built a persistent cart drawer with add/remove, quantity controls and a live subtotal, saved in local storage
- Consumed a REST product catalog API and kept cart state reactive across components without extra re-renders

Full-Stack Task & Note Management System (solo project) | Live | Code

- Built and deployed both the React and Tailwind frontend (Vercel) and a custom Express API on MongoDB Atlas with Mongoose (Render)
- Implemented full CRUD, status filtering (Pending, In Progress, Completed), search and validated responsive forms
- Solved async state issues caused by Render cold starts and configured CORS across separate frontend and backend origins

Zeduchat (team, open source) | Live | Code

- Collaboration platform for study groups, cohorts and communities, built with React, TypeScript, Tailwind CSS and REST APIs
- My contribution: responsive desktop and mobile layouts, the official landing page, mobile navigation, cohort discovery and channel views, and reusable components
- Added Open Graph, Twitter Card and meta tags for rich link previews and better SEO
- Kept UI patterns and branding consistent across web and mobile

EXPERIENCE

AI Product Engineer Intern, HNG Internship (Remote) | September 2026 to November 2026

- Worked in a remote product team on the Zedu frontend, shipping through GitHub pull requests and code review
- Proposed Playtest Agents, a feature where AI agents test games on a community platform and report bugs straight to creators for approval and fixing (submitted as a tracked product issue)

Web Development Intern, CodeAlpha (Remote) | May 2025 to August 2025

- Built responsive interfaces with HTML5, CSS3, JavaScript ES6+ and React.js
- Developed modular UI components and integrated external REST APIs
- Ran cross-browser testing and fixed responsive layout bugs
- Completed the internship with an official Certificate of Completion

Open-Source Frontend Contributor, Team Heron (Remote) | 2026

- Built reusable components, responsive views and validated form inputs with React, JavaScript and Tailwind CSS
- Merged 2 pull requests (responsive layout fixes and form validation styling) and completed 3 peer code reviews
- Worked in feature branches and resolved merge conflicts while keeping Git history clean

Graduate Engineering Trainee, Aftersales & Technical Support (NYSC), Kresta Laurel Limited, Lagos | February 2026 to present

- Diagnosed and troubleshot technical faults on electro-mechanical equipment, working independently on site and in the office
- Handled front-line client communication, including status updates and dispatch notices
- Replaced scattered paper job sheets with a centralized Excel log, cutting month-end reporting time
- Documented service workflows and tracked tasks and SLAs in ClickUp

Industrial Training Intern (SIWES), Centre for Emerging Skills Technology, Ogbomoso | October 2023 to March 2024

- Performed hardware and software diagnostics, system installations and technical documentation

EDUCATION AND TRAINING

B.Tech, Mechanical Engineering, Ladoke Akintola University of Technology (LAUTECH), Ogbomoso, Nigeria | Graduated 2024

- Final-year project: Development of a Hybrid Power System integrating solar and wind energy

Training

- Frontend Web Development (self-directed, project-based), 2025 to 2026: React component architecture, hooks, ES6+, Tailwind CSS
- Collaborative Git Workflows (cohort and open-source practice), 2026: branching, rebasing, merge conflicts, pull request reviews

Activities

- Rotaract (Rotary International): member of the Community Service & Youth Outreach Planning Committee
